

Inventory Analytics Pipeline

Pipeline Overview

Pipeline Name: Inventory Analytics Pipeline

Owner: Supply Chain Engineering Team

Description:

This pipeline processes inventory records from warehouses and generates stock analytics for business operations.

Data Flow

Source System:

Warehouse Management System

Pipeline Flow:

bronze_inventory
→ silver_inventory
→ gold_inventory

The bronze layer stores raw inventory transactions.

The silver layer performs cleansing, validation, and enrichment.

The gold layer provides inventory KPIs and stock reports.

Tables

bronze_inventory

- * item_id
- * warehouse_id
- * available_stock
- * reserved_stock

Contains PII: No

gold_inventory

Columns:

- * item_id
- * warehouse_id
- * stock_status
- * reorder_flag

Contains PII: No

Service Level Agreement

SLA: 15 Minutes

Availability: 99.95%

Last Pipeline Run: Success

Pipeline Status: Healthy

Recent Incident

Incident ID: INC-2025-205

Status: Resolved

Impact:

Inventory dashboard was delayed by 20 minutes because of delayed warehouse data ingestion.

Resolution:

Warehouse connector was restarted and backlog processing completed successfully.

Data Quality Checks

- * Null item_id validation
- * Duplicate inventory record detection
- * Negative stock validation
- * Missing warehouse mapping validation
