

Payments Pipeline Documentation

Pipeline Overview

Pipeline Name: Payments Pipeline

Owner: Payments Engineering Team

Description:

This pipeline processes customer payment transactions from the ecommerce platform and loads curated data into the analytics warehouse.

Data Flow

Source System:

Ecommerce Application

Pipeline Flow:

bronze_payments
→ silver_payments
→ gold_payments

The bronze layer stores raw payment events.

The silver layer performs data cleansing, validation, and standardization.

The gold layer contains curated payment metrics for business reporting.
